Collections / From the Conquest to the founding of Canada / utensil handle

CC BY-NC-ND 4.0 license

The handle is complete. It is cylindrical in shape, tapering towards the front end. The rear end is slightly curved downwards and domed. The front end has a recessed cylindrical neck with a flat tip. The handle is hollow, open at the front end and features two mold lines from one end to the other ; The decoration is molded. It is plant-like. The decoration covers the entire surface of the handle, except for the ends; it consists of overlapping leaves with central stems and pointed tips.
